

VEITH SYSTEM

VEITH SYSTEM MATCHING DEVICES

The **VEITH SYSTEM** Linear Matching Device and the **VEITH SYSTEM** Symmetric Matching Device are high efficient devices for accurate relaying and matching of single pieces of checked, striped or patterned fabric, in order to fulfil today's high quality standards.

The pins and the essential mechanic is based on the known and proven technology from the **VEITH SYSTEM** Pin Table. The height of the pins can be adjusted by a hand wheel. The maximum usable height of the pins is up to 9 cm.

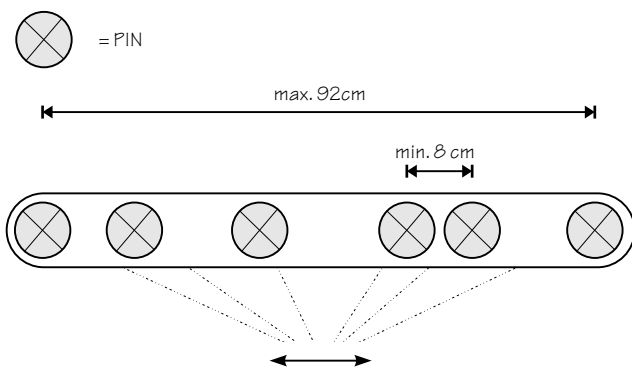

There are 3 different pin diameters available (1.0 mm, 1.4 mm, 1.8 mm). In general the pins have a rounded tops, so that the fabric will not be damaged.

There are optional special tables for these devices available. The top of these tables can be opened, so that the user has an easy access to the pins. The units can also be mounted under existing tables. In this case it will be necessary to cut slots in the table top.

VEITH SYSTEM LINEAR MATCHING DEVICE

The **VEITH SYSTEM** Linear Matching Device is used when pieces (e.g. facing, back) have to be pinned and matched exactly along a straight line, in order to cut them later all together in a pile.

The **VEITH SYSTEM** Linear Matching Device has 6 pins, which are arranged a line. Each pin can be moved separately and can be switched on and off.

The dimensions of the table for the **VEITH SYSTEM** Linear Matching Device are as follows:

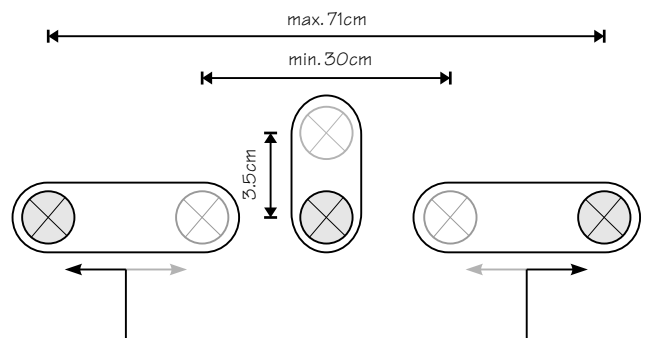

length:	109 cm
width:	44 cm
height:	80-90 cm, adjustable

VEITH SYSTEM SYMMETRIC MATCHING DEVICE

The **VEITH SYSTEM** Symmetric Matching Device is used for pinning and matching pieces, where a correct symmetry of the patterns is important (e.g. collar).

The **VEITH SYSTEM** Symmetric Matching Device has 3 pins. The position of the 2 outside pins is always symmetric to the pin in the centre and their position is adjusted by a handle. In addition the centre pin can

be adjusted in a perpendicular direction by a separate handle. So even collars with a strong curve can be matched properly.

The dimensions of the table for the **VEITH SYSTEM** Symmetric Matching Device are as follows:

length:	88 cm
width:	44 cm
height:	80-90 cm, adjustable
